Hierarchical Object Representations in the Visual Cortex and Computer Vision

[Frontiers Media SA](#) Over the past 40 years, neurobiology and computational neuroscience has proved that deeper understanding of visual processes in humans and non-human primates can lead to important advancements in computational perception theories and systems. One of the main difficulties that arises when designing automatic vision systems is developing a mechanism that can recognize - or simply find - an object when faced with all the possible variations that may occur in a natural scene, with the ease of the primate visual system. The area of the brain in primates that is dedicated at analyzing visual information is the visual cortex. The visual cortex performs a wide variety of complex tasks by means of simple operations. These seemingly simple operations are applied to several layers of neurons organized into a hierarchy, the layers representing increasingly complex, abstract intermediate processing stages. In this Research Topic we propose to bring together current efforts in neurophysiology and computer vision in order 1) To understand how the visual cortex encodes an object from a starting point where neurons respond to lines, bars or edges to the representation of an object at the top of the hierarchy that is invariant to illumination, size, location, viewpoint, rotation and robust to occlusions and clutter; and 2) How the design of automatic vision systems benefit from that knowledge to get closer to human accuracy, efficiency and robustness to variations.

Technical questions and answers for job interview Offshore Drilling Platforms

[Petrogav International](#) This book offers you a brief, but very involved look into the operations in the drilling of an oil & gas wells that will help you to be prepared for job interview at oil & gas companies. From start to finish, you'll see a general prognosis of the drilling process. If you are new to the oil & gas industry, you'll enjoy having a leg up with the knowledge of these processes. If you are a seasoned oil & gas person, you'll enjoy reading what you may or may not know in these pages. This course provides a non-technical overview of the phases, operations and terminology used on offshore drilling platforms. It is intended also for non-drilling personnel who work in the offshore drilling, exploration and production industry. This includes marine and logistics personnel, accounting, administrative and support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of drilling operations, with a particular focus on the unique aspects of offshore operations.

Visual Saliency: From Pixel-Level to Object-Level Analysis

Springer This book provides an introduction to recent advances in theory, algorithms and application of Boolean map distance for image processing. Applications include modeling what humans find salient or prominent in an image, and then using this for guiding smart image cropping, selective image filtering, image segmentation, image matting, etc. In this book, the authors present methods for both traditional and emerging saliency computation tasks, ranging from classical low-level tasks like pixel-level saliency detection to object-level tasks such as subitizing and salient object detection. For low-level tasks, the authors focus on pixel-level image processing approaches based on efficient distance transform. For object-level tasks, the authors propose data-driven methods using deep convolutional neural networks. The book includes both empirical and theoretical studies, together with implementation details of the proposed methods. Below are the key features for different types of readers. For computer vision and image processing practitioners: Efficient algorithms based on image distance transforms for two pixel-level saliency tasks; Promising deep learning techniques for two novel object-level saliency tasks; Deep neural network model pre-training with synthetic data; Thorough deep model analysis including useful visualization techniques and generalization tests; Fully reproducible with code, models and datasets available. For researchers interested in the intersection between digital topological theories and computer vision problems: Summary of theoretic findings and analysis of Boolean map distance; Theoretic algorithmic analysis; Applications in salient object detection and eye fixation prediction. Students majoring in image processing, machine learning and computer vision: This book provides up-to-date supplementary reading material for course topics like connectivity based image processing, deep learning for image processing; Some easy-to-implement algorithms for course projects with data provided (as links in the book); Hands-on programming exercises in digital topology and deep learning.

DEStech Publications, Inc The ICAEM2014 aims to bring together researchers, educators and students from around the world in both industry and academia for sharing the state-of-art research results and applications, for exploring new areas of research and development, and for discussing emerging issues on education and management fields. We received a total of 312 submissions from various parts of the world. The Technical Program Committee worked very hard to have all papers reviewed before the review deadline. The final technical program consists of 92 papers. There are one keynote speech and 2 invited sessions. The proceedings were published by DEStech Publications, Inc. and will submitted to Ei Compendex databases for indexing. We would like to mention that, due to the limitation of the conference venue capacity, we are not able to include many fine papers in the technical program. Our apology goes to those authors.

Java Interview Questions & Answers 2013-2014 Edition -Including 1500 JAVA Interview Questions & Answers

[Harry Hariom Choudhary](#) Now in the 15th Best Selling Edition, *Cracking the Java Coding Interview* gives you the interview preparation you need to get the top software developer jobs. This is a deeply technical book and focuses on the

software engineering skills to ace your interview. The book includes 1000 programming interview questions and answers, as well as other advice Coding Standards in Java and Design And Development. The full list of topics are as follows: **The Interview Process** This section offers an overview on questions are selected and how you will be evaluated. What happens when you get a question wrong? When should you start preparing, and how? What language should you use? All these questions and more are answered. **Behind the Scenes** Learn what happens behind the scenes during your interview, how decisions really get made, who you interview with, and what they ask you. Companies covered include Google, Amazon, Yahoo, Microsoft, Apple and Facebook. **Special Situations** This section explains the process for experience candidates, Program Managers, Dev Managers, Testers / SDETs, and more. Learn what your interviewers are looking for and how much code you need to know. **Before the Interview** In order to ace the interview, you first need to get an interview. This section describes what a software engineer's resume should look like and what you should be doing well before your interview. **Behavioral Preparation** Although most of a software engineering interview will be technical, behavioral questions matter too. This section covers how to prepare for behavioral questions and how to give strong, structured responses. This section covers how to prepare for technical questions (without wasting your time) and teaches actionable ways to solve the trickiest algorithm problems. It also teaches you what exactly "good coding" is when it comes to an interview. **1000 Programming Questions and Answers** This section forms the bulk of the book. Each section opens with a discussion of the core knowledge and strategies to tackle this type of question, diving into exactly how you break down and solve it. Topics covered include Arrays and Strings Linked Lists Stacks and Queues Trees and Graphs Bit Manipulation Brain Teasers Mathematics and Probability Object-Oriented Design Recursion and Dynamic Programming Sorting and Searching Scalability and Memory Limits Testing C and C++ Java Databases Threads and Locks For the widest degree of readability, the solutions are almost entirely written with Java (with the exception of C / C++ questions). A link is provided with the book so that you can download, compile, and play with the solutions yourself. **Changes from the Fourth Edition:** The fifth edition includes over 200 pages of new content, bringing the book from 300 pages to over 500 pages. Major revisions were done to almost every solution, including a number of alternate solutions added. The introductory chapters were massively expanded, as were the opening of each of the chapters under Technical Questions. In addition, 24 new questions were added. There is a growing disconnect between plethora of Java Books or resources that are available and the level of knowledge industry based Java roles expect of an aspirant or a candidate who is willing to get a foothold in the ever dynamic and constantly evolving IT industry. Hence it is of paramount importance that one gets a very sound background in Java where textbook based Java knowledge needs to be translated into tangible expertise to solve real world problems. Author delves into his decade long Java experience as a Software Engineer in many SMEs to large organisations and attempts to enlighten his audience with Java skills required to secure a role as a Java Developer. This book highlights Java 2 Standard Edition notes to prepare before a Java technical test. In the foreseeable future,

EHealth2014 – Health Informatics Meets EHealth

Outcomes Research: The Benefit of Health-IT

IOS Press It is generally accepted that information and communication technology has the potential to support high quality, high-tech medicine, but up to now healthcare has lagged behind other sectors, such as service industries, in the implementation of such technology. Medicine is now beginning to catch up, however, and the Austrian government recently agreed on the nationwide implementation of an Electronic Health Record (Elektronische Gesundheitsakte (ELGA))._x000D_ This book presents the proceedings of the 8th scientific eHealth conference, which is being held in Vienna, Austria, in the context of the eHealth Summit Austria, in April 2014. The theme of the conference is "Outcomes Research: The Benefit of Health-IT", addressing the challenges which will inevitably accompany the new opportunities offered by the increased use of ICT in healthcare. The history of technologies making the transition from the laboratory into practice is one of mixed success. It is vital to understand what makes such an implementation a positive one, and factors such as the needs, fears, and context of potential users are as important as a sound technical implementation. Priorities may need to be rethought and new dimensions added._x000D_ The book will be of interest to all those considering the effect of new technologies and eHealth on the provision of healthcare systems, and seeking to achieve services which are both technically and organizationally sound and which will also efficiently deliver noticeable benefits for users.
