### PRACTICAL MANAGEMENT FOR THE DIGITAL AGE

---

### AN INTRODUCTION FOR ENGINEERS, SCIENTISTS, AND OTHER DISCIPLINES

---

*CRC Press* Practical Management for the Digital Age is an innovative introductory management textbook that shows the sweeping impact of information technology on the business world. At the same time, it addresses the pressing issue of how environmental aspects are interwoven with management decisions. This book forms an academically rigorous, accurate, and accessible first exposure to a topic that often challenges novices with competing definitions, inconsistent use of terminology, methodological variety, and conceptual fuzziness. It has been written for readers with little or no prior knowledge of management and is compact enough to be read cover-to-cover over the course of a semester. Features of this book: Provides a broad, self-contained treatment of management for those without prior knowledge of management or commerce, emphasizing core ideas that every manager should

know. Establishes the context of modern management by characterizing the nature of the private enterprise, the economic theory of the firm, the economics of digitalization and automation, processes of innovation, and life cycle thinking. Introduces readers to various activities of managing, including business modeling, new business formation, operations management, managing people, marketing, and the management of quality and risk. Provides practical introductions to broadly applied management techniques, including financial planning, financial analysis, evaluating flows of money, and planning and monitoring projects. This book is aimed at a wide range of undergraduate and postgraduate students in a variety of disciplines, as well as practitioners. It will be especially useful to those in the fields of engineering, science, computer science, medicine, pharmacy, social sciences, and more. It will help student readers engage confidently with project work in the final parts of their degree courses and, most importantly, with managerial situations later in their careers. For instructors, who may not have a management background, this book offers content for a self-contained year-long course in management at the intermediate undergraduate level. In addition, it has been developed for undergraduate and postgraduate courses with accreditation requirements that include a taught element in management, such as the UK Engineering Council's Accreditation of Higher Education (AHEP) framework.

## **DECISION MAKING IN SERVICE INDUSTRIES**

---

### **A PRACTICAL APPROACH**

---

*CRC Press* In real-life scenarios, service management involves complex decision-making processes usually affected by random or stochastic variables. Under such uncertain conditions, the development and use of robust and flexible strategies, algorithms, and methods can provide the quantitative information necessary to make better business decisions. *Decision Making in Service Industries: A Practical Approach* explores the challenges that must be faced to provide intelligent strategies for efficient management and decision making that will increase your organization's competitiveness and profitability. The book provides insight and understanding into practical and methodological issues related to decision-making processes under uncertainty in service industries. It examines current and future trends regarding how these decision-making processes can be efficiently performed for better design of service systems by using probabilistic algorithms as well as hybrid and simulation-based approaches. Traditionally, many quantitative tools have been developed to make decisions in production companies. This book explores how to use these tools for making decisions inside service industries. Thus, the authors tackle strategic, tactical, and operational problems in service companies with the help of suitable quantitative models such as heuristic and metaheuristic algorithms, simulation, or queuing theory. Generally speaking, decision making is a hard task in business fields. Making the issue more complex, most service companies' problems are related to the uncertainty of the service demand. This book sheds light on these types of decision problems. It provides studies that demonstrate the suitability of quantitative methods to make the right decisions. Consequently, this book presents the business analytics needed to make strategic decisions in service industries.

## **HANDBOOK OF RECYCLED CONCRETE AND DEMOLITION WASTE**

---

*Elsevier* The civil engineering sector accounts for a significant percentage of global material and energy consumption and is a major contributor of waste material. The ability to recycle and reuse concrete and demolition waste is critical to reducing environmental impacts in meeting national, regional and global environmental targets. *Handbook of recycled concrete and demolition waste* summarises key recent research in achieving these goals. Part one considers techniques for managing construction and demolition waste, including waste management plans, ways of estimating levels of waste, the types and optimal location of waste recycling plants and the economics of managing construction and demolition waste. Part two reviews key steps in handling construction and demolition waste. It begins with a comparison between conventional demolition and construction techniques before going on to discuss the preparation, refinement and quality control of concrete aggregates produced from waste. It concludes by assessing the mechanical properties, strength and durability of concrete made using recycled aggregates. Part three includes examples of the use of recycled aggregates in applications such as roads, pavements, high-performance concrete and alkali-activated or geopolymer

cements. Finally, the book discusses environmental and safety issues such as the removal of gypsum, asbestos and alkali-silica reaction (ASR) concrete, as well as life-cycle analysis of concrete with recycled aggregates. Handbook of recycled concrete and demolition waste is a standard reference for all those involved in the civil engineering sector, as well as academic researchers in the field. Summarises key recent research in recycling and reusing concrete and demolition waste to reduce environmental impacts and meet national, regional and global environmental targets Considers techniques for managing construction and demolition waste, including waste management plans, ways of estimating levels of waste, the types and optimal location of waste recycling plants Reviews key steps in handling construction and demolition waste

### **THE COMMERCIAL SUCCESS AND POLITICAL CONTROVERSIES OF HONG KONG'S RAILWAY**

---

*Hong Kong University Press* With the "merger" of the MTRC and the KCRC in 2007, the history of Hong Kong's railways turned a new page. The two government-owned corporations were exceptionally profitable. Yet, this commercially successful railway model was not without social costs and political controversies. Moving Millions critically examines the governance history of the MTRC and the KCRC over the past three decades, and sheds light on the challenges to Hong Kong's railway after the "merger". The author discusses complex relationships between railway management, government policy and politics. Critical issues are analysed, including corporate

governance; railway-property development; funding and managing new projects; mismanagement and controversies; public accountability; and passenger interest in fares, choice and convenience. The book compares how differently the MTRC and the KCRC dealt with the government, civil society, the market, and with each other to achieve commercial objectives and tackle public interests issues in a post-industrial society, where public expectations are rising despite constraints in democracy.

## **TECHNICAL ANALYSIS OF STOCK TRENDS, TENTH EDITION**

---

*CRC Press* Sixty-three years. Sixty-three years and Technical Analysis of Stock Trends still towers over the discipline of technical analysis like a mighty redwood. Originally published in 1948 and now in its Tenth Edition, this book remains the original and most important work on this topic. The book contains more than dry chart patterns, it passes down accumulated experience and wisdom from Dow to Schabacker, to Edwards, and to Magee, and has been modernized by W.H.C. Bassetti. Bassetti, a client, friend, and student of John Magee, one of the original authors, has converted the material on the craft of manual charting with TEKNIPLAT chart paper to modern computer software methods. In actuality, none of Magee's concepts have proven invalid and some of his work predated modern concepts such as beta and volatility. In addition, Magee described a trend-following procedure that is so simple and so elegant that Bassetti has adapted it to enable the general investor to use it to replace the cranky Dow Theory. This procedure, called the Basing Points procedure, is extensively described in the new Tenth Edition along with new material on powerful moving average systems and Leverage Space Portfolio Model generously contributed by the formidable analyst, Ralph Vince., author of Handbook of Portfolio Mathematics. See what's new in the Tenth Edition: Chapters on replacing Dow Theory Update of Dow Theory Record Deletion of extraneous material on manual charting New chapters on Stops and Basing Points New material on moving average systems New material on Ralph Vince's Leverage Space Portfolio Model So much has changed since the first edition, yet so much has remained the same. Everyone wants to know how to play the game. The foundational work of the discipline of technical analysis, this book gives you more than a technical formula for trading and investing, it gives you the knowledge and wisdom to craft long-term success.

*Springer Science & Business Media* One of the main novelties of this book is its establishment of a clear relationship between social and public choice on one hand and multiple criteria decision analysis on the other. This relationship leads to the new concept of Social Multi-Criteria Evaluation (SMCE). SMCE is proposed as a policy framework to integrate different scientific languages, for example, when concerns about civil society and future generations have to be considered along with policy imperatives and market conditions.

### **PROCEEDINGS OF THE TENTH INTERNATIONAL CONFERENCE: EXPAND AND ENRICH THE DOMAINS OF THINKING AND APPLICATION**

*Springer Science & Business Media* It was a great honor and privilege to organize the Tenth International Conference on Multiple Criteria Decision Making at Taipei, Taiwan, July 19-24, 1992. Accompanying this unique honor and privilege there was a series of complex, challenging problems. Each of them involved multiple criteria, fuzziness, uncertainty, unknown yet dynamic changes. The problem sometimes cost us sleep because we wanted to do the very best job, but in reality it seemed to be impossible. The following are the main goals of the organization committee: (i) inviting all prominent and distinguished MCDM scholars around the world to participate in the conference and to present their up-to-date research results, (ii) providing financial aid and hospitality so that each invited speaker can have free room and board at a five star hotel, (iii) creating an environment so that all participants can freely exchange their ideas, and build friendships around the world. Due to the enthusiastic participation of the prominent scholars, the generous support of the Taiwan government, universities, the Industrial leaders and nonprofit foundations, and the active problem solving attitude and doing of the organizational committee and the Habitual Domain (HD) club, the conference was a great success.

## **TENTH E.C. PHOTOVOLTAIC SOLAR ENERGY CONFERENCE**

### **PROCEEDINGS OF THE INTERNATIONAL CONFERENCE, HELD AT LISBON, PORTUGAL, 8-12 APRIL 1991**

*Springer* I have great pleasure in presenting the Proceedings of the 10th European Photovoltaic Solar Energy Conference held in Lisbon from 8 to 12 April 1991. These Proceedings contain all the scientific papers delivered at the Conference. The following is a short summary of the Conference activities. The Conference was opened by the Minister of Industry and Energy of Portugal, Eng. Luis Mira do Amaral. At the opening ceremony the Becquerel Prize, created by the Commission of the European Communities, was awarded to Professor Werner Bloss of the University of Stuttgart, and presented by Professor Philippe Bourdeau, Director at the Directorate-General for Science, Research and Development. The Becquerelle lecture delivered by Professor Bloss constituted the scientific opening to the conference. About 760 delegates from 53 countries presented around 350 contributions, 50 of them as plenary lectures; the contributions were selected among the many papers submitted, this time more strictly than ever before. Also a selected group of scientists were invited to deliver 15 review lectures, to provide an adequate context to the contributions to the Conference. A Symposium on Photovoltaics in Developing Countries, which was very well attended, took place as a parallel event. The Symposium provided an opportunity to hear not only experts of the industrialized countries, but also speakers from the countries where photovoltaics provides services of paramount value.

### **SLUDGE MANAGEMENT FOR THE 21ST CENTURY**

---

*International Water Assn* With improvements in wastewater treatment has come an increase in the production of sewage sludge. In addition the materials disposed into the sewerage system by modern society mean that sludge is not only rich in organic carbon and pathogens, but also in heavy metals and other pollutants. The IWA Specialist Group in Sludge Management recognised these challenges, and is addressing them in a series of specialist conferences: the one in April 1999 in Perth, Australia focused on thermal processes and their management. With over a hundred participants from more than 30 countries the conference proved highly successful. These proceedings contain papers which were selected from the original 37 presentations after passing through the review process. Papers covered the whole range of thermal processes: hydrothermal oxidation, gasification, pyrolysis, incineration, melting to reuse of process residues. Management issues and assessment of sustainability of thermal processes based on life-cycle analyses were debated, with a focus on "value-adding" sludge management systems and renewable resource options.
