Born to Bark

My Adventures with an Irrepressible and Unforgettable Dog

Simon and Schuster "For Christmas the woman who would become my wife bought me a dog—a little terrier. The next year her Christmas gift to me was a shotgun. Most of the people in my family believe that those two gifts were not unrelated." So begins Born to Bark, the charming new memoir by psychologist and beloved dog expert Stan Coren of his relationship with an irrepressible gray Cairn terrier named Flint. Stan immediately loved the pup for his friendly nature and indefatigable spirit, though his wife soon found the dog's unpredictable exuberance difficult to deal with, to say the least. Even though Flint drove Stan's wife up the wall, he became the joy of Stan's life. The key to unlocking this psychologist-author's way of looking at dog behavior, Flint also became the inspiration behind Coren's classic, The Intelligence of Dogs. Undeterred by Flint's irrepressible behavior (and by the breeder's warning that he might be untrainable), Coren set out to prove that his furry companion could pass muster with the best of them. He persevered in training the unruly dog and even ventured into the competitive circles of obedience trials in dog shows, where Flint eventually made canine history as the highest-scoring Cairn terrier in obedience competition up to that time. (Stan chose not to tell his wife that the highest-ranking obedience dog of that year, a border collie, earned a total score that was fifty times higher.) The longest-running popular expert on human-dog bonding, Coren has enlivened his respected books and theories about dogs with accounts of his own experiences in training, living with, loving, and trying to understand them. A consummate storyteller, Coren now tells the wry, poignant, goofy, and good-hearted tale of his life with the dog who (in the words of his own book titles) taught him How to Speak Dog and How Dogs Think and whose antics made him ask Why Does My Dog Act That Way? Illustrated with Coren's own delightful line drawings and photos, and interwoven with his heartfelt anecdotes of other beloved dogs from his earlier life, Born to Bark is an irresistible good dog/bad dog tale of this extraordinary, willful pooch and his profound impact on his master's insights into canine behavior as a research psychologist and on his outlook on life as a whole.

How Dogs Think

Simon and Schuster Our understanding of how dogs think is littered with common misconceptions about the extent of their intellect and how they make sense of the world around them. How Dogs Think unravels the mystery of what a dog can understand and how much dogs can learn. World-renowned dog expert Stanley Coren explores the thought processes of dogs, describes how dogs solve problems, explains the depths and limits of their thinking and examines the kind of concepts which dogs can and cannot deal with. Along with practical advice for people who want to improve their dog's learning ability and working intelligence, How Dogs Think will answer such questions as: Do dogs have a notion of time? To what extent do dogs understand what you say? How sharp are their senses? What do they see and hear? Do dogs have a sense of music, humour, empathy, guilt or love? Do they learn by observation the way that people do? How much can they remember? Do dogs have ESP or the ability to predict earthquakes, and is it true that they can detect cancer or the onset of an epileptic fit in their owners? How To Find The Dog That Matches Your Personality

To discover which dogs will suit them best, readers take simple personality tests that reveal what they are looking for in a relationship. Stories about people and their four-legged best friends - and a gallery of photographs - capture the special dynamics between couples ranging from Freud and his Chow-Chow to Picasso and his Afghan hound.

The Pawprints of History

Dogs in the Course of Human Events

Simon and Schuster *The Pawprints of History* shines a new light on a favorite subject -- the relationship between humans and their four-legged best friends. Stanley Coren, a renowned expert on dog-human interactions, has combed the annals of history and found captivating stories of how dogs have lent a helping paw and influenced the actions, decisions, and fates of well-known figures from every era and throughout the world. As history's great figures strut across the stage, Coren guides us from the wings, adoringly picking out the canine cameos and giving every dog of distinction its day. In this unparalleled chronicle, we see how Florence Nightingale's chance encounter with a wounded dog changed her life by leading her to the vocation of nursing. We learn why Dr. Freud's Chow Chow attended all of his therapy sessions and how the life of the Fifth Dalai Lama was saved by a dog who shared his bed. Dogs have even found their way to the battlefield -- great military leaders such as Robert the Bruce and Omar Bradley have shared their lives, exploits, and gunfire with dogs. From Wagner, who admitted that one of the arias in the opera *Siegfried* was "written" by one of his dogs, to the dogs that inspired and lived with Presidents Lincoln, Roosevelt, Johnson, and Clinton, these loving canines do double duty as loyal pets and creative muses. From war to art, across the spectrum of human endeavor and achievement, there often stands, not only at his side but leading the way, man's beloved "best friend." For those who believe that behind every great person is a good dog, the uplifting stories in *The Pawprints of History* will be a lasting delight.

This is what happens with most technologies: They begin in the hands of the few, and they end up in the hands of the many. Along the way, they sometimes transform the world.

Soldier Dogs

Penguin A leading reporter offers a tour of military working dogs' extraordinary training, heroic accomplishments, and the lasting impacts they have on those who work with them. People all over the world have been riveted by the story of Cairo, the Belgian Malinois who was a part of the Navy SEAL team that led the raid on Osama bin Laden's compound. A dog's natural intelligence, physical abilities, and pure loyalty contribute more to our military efforts than ever before. You don't have to be a dog lover to be fascinated by the idea that a dog—the cousin of that furry guy begging for scraps under your table—could be one of the heroes who helped execute the most vital and high-tech military mission of the new millennium. Now Maria Goodavage, editor and featured writer for one of the world's most widely read dog blogs, tells heartwarming stories of modern soldier dogs and the amazing bonds that develop between them and their handlers. Beyond tales of training, operations, retirement, and adoption into the families of fallen soldiers, Goodavage talks to leading dog-cognition experts about why dogs like nothing more than to be on a mission with a handler they trust, no matter how deadly the IEDs they are sniffing, nor how far they must parachute or rappel from aircraft into enemy territory. "Military working dogs live for love and praise from their handlers," says Ron Aiello, president of the United States War Dogs Association and a former marine scout dog handler. "The work is all a big game, and then they get that pet, that praise. They would do anything for their handler." This is an unprecedented window into the world of these adventurous, loving warriors.

The Left-Hander Syndrome

The Causes and Consequences of Left-Handedness

Simon and Schuster Nine out of every ten human beings are naturally right-handed. Those who were not right-handed were feared, shunned, or forcibly retrained in many periods and cultures. Indeed, some members of fundamentalist sects still regard left-handers as in league with the devil, and prejudices against left-handers are reflected in the multiple associations of right with good and left with bad that have become enshrined in everyday language and folklore. A "left-handed compliment" is actually an insult, and the dictionary definition of left-handed includes the terms "awkward," "clumsy," "ill-omened," and "illegitimate." In his summary of scientific research into sidedness, Stanley Coren rapidly dismisses the notion of the southpaw as somehow tainted. Increasingly we are coming to understand, however, that left-handedness does have social, educational, medical, and psychological implications. Coren uses entertaining examples to illuminate the paths of research he has followed, and answers vitally important questions such as: What are the neuropsychological and behavioral implications of differences for left-handers themselves, as well as for their parents, teachers, spouses, children, counselors, and physicians? How can we determine our own patterns of sidedness? Are they encoded in our genes? And, very importantly, how can we make the world more comfortable and safer for left-handers? Coren persuasively argues that left-handers are an invisible minority who must define themselves and organize for self-protections in the same way that more visible minorities have done. Much (though not all) of the risk to which left-handers are exposed derives from the fact that the tools they use and the machines they operate are designed for right-handers, a flaw that given heightened public awareness would be easy to correct. Coren advocates a change in the way the right-handed majority treats its left-handed minority to eliminate the risks left-handers face.

Freedom in the Air

A Czech Flyer and his Aircrew Dog

Casemate Publishers "Deals with a little-known aspect of the war . . . alongside the moving story of one man's relationship with a very special animal."—Sqn Ldr Paul Scott, *Spirit of the Air* This biography tells of the life of Václav Robert Bozděch, a Czech airman who escaped from the Nazi invasion, fought with the French and finally arrived in Britain to fly as an air-gunner with the RAF during World War II. He returned to his homeland after World War II but escaped back to the UK again when the communists gained control. Again he joined the RAF and rose to the rank of Warrant Officer. The unique part of this is that from his time in France, throughout World War II and until halfway through his second tour with the RAF, Bozděch was inseparable from his Alsatian dog, Antis, who became famous and was awarded a dog equivalent to the VC. Antis flew with his owner on many bomber raids, became the squadron mascot and was officially a serving RAF dog. He played an amazing part in the second escape from the Czech communist regime, when Bozděch was lucky to make it over the border to the US zone in Germany. "The main hero of the book is not Bozděch himself, but his Alsatian, Antis . . . This book makes clear the extent of wartime and post-war suffering endured by Czechs and others fulfilling their roles in the overall search for freedom."—Aircraft Owner & Pilot "This absorbing account of flying in WWII is based on the inseparable bond between man and dog. It is a moving story with humor and sadness. A Great Read that is Highly Recommended."—Firetrench

As president of The American Pet Products Association, Vetere has partnered with Purdue University researchers to explore the human-animal bond. Here, he also considers what dogs teach us about intimacy and relationships and tells why they've become the center of American family life. With interviews from CEOs who've learned important lessons from their dogs, *From Wags to Riches* shows how you can apply insights from dog trainers and animal behavior experts to boost creativity and build a playful environment where people feel free to innovate. Vetere demonstrates that canine-like qualities such as sharing responsibility across pack members and tuning into each other's needs and emotions by observing facial expressions and body cues can dramatically improve your personal effectiveness and ability to lead. *From Wags to Riches* contains practical tips and canine insights for any dog lover who aspires to become leader of his or her pack.

We Are Best Friends: Animals in Society

MDPI Friendships between humans and non-human animals were once dismissed as sentimental anthropomorphism. After decades of research on the emotional and cognitive capacities of animals, we now recognize human-animal friendships as true reciprocal relationships. Friendships with animals have many of the same characteristics as friendships between humans. Both parties enjoy the shared presence that friendship entails along with the pleasures that come with knowing another being. Both friends develop ways of communicating apart from, or in addition to, spoken language.

Lateral Preferences and Human Behavior

Springer Science & Business Media Lateral preferences are strange, puzzling, and on the surface, not particularly adaptive aspects of behavior. Why one chooses habitually to write or to brush the teeth with the right hand, while a friend or family member habitually uses the left hand, might be interesting enough to elicit some conversation over dinner or a drink, but certainly does not seem to warrant serious scientific study. Yet when one looks at human behaviors more carefully, one becomes aware that asymmetrical behaviors favoring one side or the other are actually a fairly universal characteristic of human beings. In the same way that we are right or left handed, we are also right or left footed, eyed, and eared. As a species, we are quite lopsided in our behavioral coordinations; furthermore, the vast majority of us are right sided. Considering that we are looking at a sizable number of behaviors, and at a set of biases that seem to be systematic and show a predictable skew in the population, the problem takes on greater significance. The most obvious form of lateral preference is, of course, handedness. When studying behavioral asymmetries, this is the issue with which most investigators start. Actually, we entered this research area through a much different route. Around 1971 we became interested in the problem of eye dominance or eye preference. This is a behavior where the input to one eye seems to be preferred over that to the other in certain binocular viewing situations.
