The Phonetics and Phonology of Contrast

The Case of the Romanian Vowel System

Walter de Gruyter GmbH & Co KG **This book proposes that phonological contrast, in particular the robustness of a phonemic contrast, does not depend solely on the presence of minimal pairs, but is instead affected by a set of phonetic, usage-based, and systemic factors. This perspective opens phonology to a more direct interpretation through phonetic analysis, undertaken in a series of case studies on the Romanian vowel system. Both the synchronic phonetics and morpho-phonological alternations are studied, to understand the forces that have historically shaped and now maintain the phonemic system of Romanian. A corpus study of phoneme type frequency in Romanian reveals marginal contrasts among vowels, in which a sharp distinction between allophones and phonemes fails to capture relationships among sounds. An investigation of Romanian /t/ provides insight into the historical roots of marginal contrast, and a large acoustic study of Romanian vowels and diphthongs is a backdrop for evaluating the phonetic and perceptual realization of marginal contrast. The results provide impetus for a model in which phonology, phonetics, morphology and perception interact in a multidimensional way.**

Tone Orthography and Literacy

The voice of evidence in ten Niger-Congo languages

John Benjamins Publishing Company **This book presents the results of a series of literacy experiments in ten Niger-Congo languages, representing four language families and spanning five countries. It asks the research question, "To what extent does full tone marking contribute to oral reading fluency, comprehension and writing accuracy, and does that contribution vary from language to language?". One of the main findings is that the ethno-literacy profile of the language community and the social profile of the individual are stronger predictors of reading and writing performance than are the linguistic and orthographic profiles of the language. Our data also suggest that full tone marking may be more beneficial for less educated readers and those with less experience of L1 literacy. The book will bring practical help to linguists and literacy specialists in Africa and beyond who are helping to develop orthographies for tone languages. It will also be of interest to cognitive psychologists exploring the reading process, and researchers investigating writing systems.**
