The Yugo

The Rise and Fall of the Worst Car in History

Hill and Wang Six months after its American introduction in 1985, the Yugo was a punch line; within a year, it was a staple of late-night comedy. By 2000, NPR's Car Talk declared it "the worst car of the millennium." And for most Americans that's where the story begins and ends. Hardly. The short, unhappy life of the car, the men who built it, the men who imported it, and the decade that embraced and discarded it is rollicking and astounding, and one of the greatest untold business-cum-morality tales of the 1980s. Mix one rabid entrepreneur, several thousand "good" communists, a willing U.S. State Department, the shortsighted Detroit auto industry, and improvident bankers, shake vigorously, and you've got The Yugo: The Rise and Fall of the Worst Car in History. Brilliantly re-creating the amazing confluence of events that produced the Yugo, Yugoslav expert Jason Vuic uproariously tells the story of the car that became an international joke: The American CEO who happens upon a Yugo right when his company needs to find a new import or go under. A State Department eager to aid Yugoslavia's nonaligned communist government. Zastava Automobiles, which overhauls its factory to produce an American-ready Yugo in six months. And a hole left by Detroit in the cheap subcompact market that creates a race to the bottom that leaves the Yugo . . . at the bottom.

Strategic Planning for the Florida Citrus Industry

Addressing Citrus Greening Disease

National Academies Press Citrus greening, a disease that reduces yield, compromises the flavor, color, and size of citrus fruit and eventually kills the citrus tree, is now present in all 34 Floridian citrus-producing counties. Caused by an insect-spread bacterial infection, the disease reduced citrus production in 2008 by several percent and continues to spread, threatening the existence of Florida's \$9.3 billion citrus industry. A successful citrus greening response will focus on earlier detection of diseased trees, so that these sources of new infections can be removed more quickly, and on new methods to control the insects that carry the bacteria. In the longer term, technologies such as genomics could be used to develop new citrus strains that are resistant to both the bacteria and the insect.

Quill & Quire

Girl in Translation

Penguin From the author of *Searching for Sylvie Lee*, the iconic, New York Times-bestselling debut novel that introduced an important Chinese-American voice with an inspiring story of an immigrant girl forced to choose between two worlds and two futures. When Kimberly Chang and her mother emigrate from Hong Kong to Brooklyn squalor, she quickly begins a secret double life: exceptional schoolgirl during the day, Chinatown sweatshop worker in the evenings. Disguising the more difficult truths of her life—like the staggering degree of her poverty, the weight of her family's future resting on her shoulders, or her secret love for a factory boy who shares none of her talent or ambition—Kimberly learns to constantly translate not just her language but herself back and forth between the worlds she straddles. Through Kimberly's story, author Jean Kwok, who also emigrated from Hong Kong as a young girl, brings to the page the lives of countless immigrants who are caught between the pressure to succeed in America, their duty to their family, and their own personal desires, exposing a world that we rarely hear about. Written in an indelible voice that dramatizes the tensions of an immigrant girl growing up between two cultures, surrounded by a language and world only half understood, *Girl in Translation* is an unforgettable and classic novel of an American immigrant—a moving tale of hardship and triumph, heartbreak and love, and all that gets lost in translation.

Chrysler's Turbine Car

The Rise and Fall of Detroit's Coolest Creation

Chicago Review Press Offering a behind-the-scenes look into the world of automotive research and development in the 1960s, this engaging narrative traces the birth of Chrysler's alternative "jet" car and reveals the story behind its sudden and mysterious demise. Relying on extensive research and firsthand accounts from surviving members of the turbine car program—including the metallurgist who created the exotic metals for the engine and the test driver who drove it at Chrysler's proving grounds—this chronicle documents the bold development of an automobile with a jet turbine engine. In addition to running well on virtually any flammable liquid—including kerosene, vodka, heating oil, and Chanel N°5 perfume—the pioneering engines had one fifth the number of moving parts and required less maintenance than conventional engines. Despite the fleet's amazing performance over millions of miles by test drivers, Chrysler pulled the plug on the project and crushed almost all of the cars. The reasons behind the surprising end to the jet car fleet are finally explained here.

Lemon-Aid New Cars and Trucks 2011

Dundurn As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, *Lemon-Aid* guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and

Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, 'fess up."

Winning in Emerging Markets

A Road Map for Strategy and Execution

Harvard Business Press The best way to select emerging markets to exploit is to evaluate their size or growth potential, right? Not according to Krishna Palepu and Tarun Khanna. In *Winning in Emerging Markets*, these leading scholars on the subject present a decidedly different framework for making this crucial choice. The authors argue that the primary exploitable characteristic of emerging markets is the lack of institutions (credit-card systems, intellectual-property adjudication, data research firms) that facilitate efficient business operations. While such "institutional voids" present challenges, they also provide major opportunities-for multinationals and local contenders. Palepu and Khanna provide a playbook for assessing emerging markets' potential and for crafting strategies for succeeding in those markets. They explain how to: · Spot institutional voids in developing economies, including in product, labor, and capital markets, as well as social and political systems · Identify opportunities to fill those voids; for example, by building or improving market institutions yourself · Exploit those opportunities through a rigorous five-phase process, including studying the market over time and acquiring new capabilities Packed with vivid examples and practical toolkits, *Winning in Emerging Markets* is a crucial resource for any company seeking to define and execute business strategy in developing economies.
