How Asia Works

Success and Failure In the World's Most Dynamic Region

Open Road + Grove/Atlantic "A good read for anyone who wants to understand what actually determines whether a developing economy will succeed" (Bill Gates, "Top 5 Books of the Year"). An Economist Best Book of the Year from a reporter who has spent two decades in the region, and who The Financial Times said "should be named chief myth-buster for Asian business." In *How Asia Works*, Joe Studwell distills his extensive research into the economies of nine countries—Japan, South Korea, Taiwan, Indonesia, Malaysia, Thailand, the Philippines, Vietnam, and China—into an accessible, readable narrative that debunks Western misconceptions, shows what really happened in Asia and why, and for once makes clear why some countries have

boomed while others have languished. Studwell's in-depth analysis focuses on three main areas: land policy, manufacturing, and finance. Land reform has been essential to the success of Asian economies, giving a kick-start to development by utilizing a large workforce and providing capital for growth. With manufacturing, industrial development alone is not sufficient, Studwell argues. Instead, countries need "export discipline," a government that forces companies to compete on the global scale. And in finance, effective regulation is essential for fostering, and sustaining growth. To explore all of these subjects, Studwell journeys far and wide, drawing on fascinating examples from a Philippine sugar baron's stifling of reform to the explosive growth at a Korean steel mill. "Provocative . . . How Asia Works is a striking and enlightening book . . . A lively mix of scholarship, reporting and polemic." —The Economist

Fundamentals of Cyber Security

BPB Publications Description-The book has been written in such a way that the concepts are explained in detail, giving adequate emphasis on examples. To make clarity on the topic, diagrams are given extensively throughout the text. Various questions are included that vary widely in type and difficulty to understand the text. This text is user-focused and has been highly updated including topics, pictures and examples. The book features the most current research findings in all aspects of information Security. From successfully implementing technology change to understanding the human factors in IT utilization, these volumes address many of the core concepts and organizational applications, implications of information technology in organizations.

Key Features

- A* Comprehensive coverage of various aspects of cyber security concepts.
- A* Simple language, crystal clear approach, straight forward comprehensible presentation.
- A* Adopting user-friendly classroom lecture style.
- A* The concepts are duly supported by several examples.
- A* Previous years question papers are also included.
- A* The important set of questions comprising of more than 90 questions with short answers are also included.

Table of Contents:

- Chapter-1 : Introduction to Information Systems
- Chapter-2 : Information Security
- Chapter-3 : Application Security
- Chapter-4 : Security Threats
- Chapter-5 : Development of secure Information System
- Chapter-6 : Security Issues In Hardware
- Chapter-7 : Security Policies

World Investment Report 2019

Special Economic Zones

United Nations The 2019 edition of the World Investment Report focuses on special economic zones (SEZs) which are widely used across most developing and many developed economies. Although the performance of many zones remains below expectations, the rate of establishment of new zones is accelerating as governments increasingly compete for internationally mobile industrial activity. Policymakers face not only the traditional challenges to making SEZs succeed, including the need for strategic focus, sound governance models, and effective investment promotion tools, but also new challenges brought about by the sustainable development imperative, the new industrial revolution, and changing patterns of international production. The Report explores the place of SEZs in today's global investment landscape and provides guidance for policymakers on how to make SEZs work for sustainable development. It presents international investment trends and prospects at global, regional and national levels, as well as the evolution of international production and global value chains. It analyses the latest developments in new policy measures for investment promotion, facilitation and regulation around the world, as well as updates on investment treaties, their reform and investment dispute settlement cases.

Domain Engineering

Product Lines, Languages, and Conceptual Models

Springer Science & Business Media Domain engineering is a set of activities intended to develop, maintain, and manage the creation and evolution of an area of knowledge suitable for processing by a range of software systems. It is of considerable practical significance, as it provides methods and techniques that help reduce time-to-market, development costs, and project risks on one hand, and helps improve system quality and performance on a consistent basis on the other. In this book, the editors present a collection of invited chapters from various fields related to domain engineering. The individual chapters present state-of-the-art research and are organized in three parts. The first part focuses on results that deal with domain engineering in software product lines. The second part describes how domain-specific languages are used to support the construction and deployment of domains. Finally, the third part presents contributions dealing with domain engineering within the field of conceptual modeling. All chapters utilize a similar terminology, which will help readers to understand and relate to the chapters content. The book will be especially rewarding for researchers and students of software engineering methodologies in general and of domain engineering and its related fields in particular, as it contains the most comprehensive and up-to-date information on this topic.

Robo-Advisory

Investing in the Digital Age

Springer Nature Robo-Advisory is a field that has gained momentum over recent years, propelled by the increasing digitalization and automation of global financial markets. More and more money has been flowing into automated advisory, raising essential questions regarding the foundations, mechanics, and performance of such solutions. However, a comprehensive summary taking stock of this new solution at the intersection of finance and technology with consideration for both aspects of theory and implementation has so far been wanting. This book offers such a summary, providing unique insights into the state of Robo-Advisory. Drawing on a

pool of expert authors from within the field, this edited collection aims at being the vital go-to resource for academics, students, policy-makers, and practitioners alike wishing to engage with the topic. Split into four parts, the book begins with a survey of academic literature and its key insights paired with an analysis of market developments in Robo-Advisory thus far. The second part tackles specific questions of implementation, which are complemented by practical case studies in Part III. Finally, the fourth part looks ahead to the future, addressing questions of key importance such as artificial intelligence, big data, and social networks. Thereby, this timely book conveys both a comprehensive grasp of the status-quo as well as a guiding outlook onto future trends and developments within the field.

Instrument Practice

Market-Led Strategic Change

Routledge The third edition of *Market-Led Strategic Change* builds on the massive success of the previous two editions, popular with lecturers and students alike, presenting an innovative approach to solving an old problem: making marketing happen! In his witty and direct style, Nigel Piercy has radically updated this seminal text, popular with managers, students, and lecturers alike, to take into account the most recent developments in the field. With a central focus on customer value and creative strategic thinking, he fully evaluates the impact of electronic business on marketing and sales strategy, and stresses the goal of totally integrated marketing to deliver superior customer value. "Reality Checks" throughout the text challenge the reader to be realistic and pragmatic. The book confronts the critical issues now faced in strategic marketing: · escalating customer demands driving the imperative for superior value · totally integrated marketing to deliver customer value · the profound impact of electronic business on customer relationships · managing processes like planning and budgeting to achieve effective implementation At once pragmatic, cutting-edge and thought-provoking, *Market-Led Strategic Change* is essential reading for all managers, students and lecturers seeking a definitive guide to the demands and challenges of strategic marketing in the 21st century.

Human Factors in Auditory

Warnings

Routledge First published in 1999, this book provides answers to many of the problems associated with the design and application of auditory warnings. It represents the position of contemporary auditory warnings research and development in a single unique volume. Application domains include air traffic control, aviation, emergency services, manufacturing, medicine, military and nuclear power. The contributors constitute many key experts in this area, some of whom are psychoacousticians, some psychologists and some ergonomists. Correspondingly, the chapters range from those covering basic topics such as audibility and localization of warnings, through psychological issues concerned with the relationship between design, understanding and the behavioural response, to the more general ergonomic issues of implementing the warnings in a particular context. Although each of the chapters takes a slightly different perspective, they all balance theoretical underpinning with practical application. The editors have undertaken to draw all of the contributions together by providing an overview of warnings research at the beginning of the book and summary of the contributions at the end. This book will appeal to all involved in the research, development, design and implementation of auditory warnings.

Computer Security Fundamentals

Que Publishing One-volume coverage of all the core concepts, terminology, issues, and practical skills modern computer security professionals need to know * *The most up-to-date computer security concepts text on the market. *Strong coverage and comprehensive analysis of key attacks, including denial of service, malware, and viruses. *Covers oft-neglected subject areas such as cyberterrorism, computer fraud, and industrial espionage. *Contains end-of-chapter exercises, projects, review questions, and plenty of realworld tips. Computer Security Fundamentals, Second Edition is designed to be the ideal one volume gateway into the entire field of computer security. It brings together thoroughly updated coverage of all basic concepts, terminology, and issues, along with the practical skills essential to security. Drawing on his extensive experience as both an IT professional and instructor, Chuck Easttom thoroughly covers core topics such as vulnerability assessment, virus attacks, buffer overflow, hacking, spyware, network defense, firewalls, VPNs, Intrusion Detection Systems, and passwords. Unlike many other authors, however, he also fully addresses more specialized issues, including cyber terrorism, industrial espionage and encryption - including public/private key systems, digital signatures, and certificates. This edition has been extensively updated to address the latest issues and technologies, including cyberbullying/cyberstalking, session hijacking, steganography, and more. Its examples have been updated to reflect the current state-of-the-art in both attacks and defense. End-of-chapter

exercises, projects, and review questions guide readers in applying the knowledge they've gained, and Easttom offers many tips that readers would otherwise have to discover through hard experience.

The Animal Manifesto

Six Reasons for Expanding Our Compassion Footprint

New World Library In this inspirational call to action, Marc Bekoff, the world's leading expert on animal emotions, gently shows that improving our treatment of animals is a matter of rethinking our many daily decisions and "expanding our compassion footprint." He demonstrates that animals experience a rich range of emotions, including empathy and compassion, and that they clearly know right from wrong. Driven by moral imperatives and pressing environmental realities, Bekoff offers six compelling reasons for changing the way we treat animals — whether they're in factory farms, labs, circuses, or our vanishing wilderness. The result is a well-researched, informative guide that will change animal and human lives for the better.
