Changing the Course of Failure

How Schools and Parents Can Help Low-Achieving Students

Rowman & Littlefield The basic purpose of this book is to help policy makers at all levels of government understand that (1) widespread adolescent underachievement is not susceptible to solution by educational interventions no matter how much money is allocated to public education; and (2) there are unidentified educational and civic costs to focusing on low achievement and to expecting public institutions of education (for K-12 and college) to solve a growing social problem. Many policy makers seem to think that teachers/schools are the primary cause of low achievement. Educational institutions still cannot solve a non-education-caused problem and haven't done so for over fifty years despite all the public and private money that has been allocated. The book concludes with suggested policies for addressing the damage to public education from "gap-closing" standards and with suggested areas for policy making in order to change the current course of failure for many low-achieving students.

Practical RF Amplifier Design and Performance Optimization with SPICE and Load- and Source-pull Techniques

Springer Nature This book explains and demonstrates with an exhaustive set of design examples, how common types of radio frequency (RF) amplifiers (classes A, B, AB, C, D, E, F, G and H) can be designed, and then have their performance characteristics evaluated and optimized with SPICE. The author demonstrates the transient analysis features of SPICE, along with industry-standard load- and source-pull techniques to simulate the steady-state, long-term time-domain behavior of any test RF amplifier. Describes methods for designing and evaluating/optimizing the performance characteristics of an RF amplifier that circumvent the issues involved with existing, traditional methods and don't require expensive, high-end software tools. Includes C language executables for each RF amplifier type, eliminating errors that might creep in while computing passive component (capacitor, inductor, resistor) values for a given RF amplifier type. Demonstrates industry-standard load- and source-pull schemes that can be included easily in text SPICE netlists, allowing accurate calculation of impedance matching and impedance values at the input and output ports of the test RF amplifier, eliminating messy, error-prone S parameter based calculations.

Innovative Data Integration and Conceptual Space Modeling for COVID, Cancer, and Cardiac Care

Academic Press In recent years, scientific research and translation medicine have placed increased emphasis on computational methodology and data curation across many disciplines, both to advance underlying science and to instantiate precision-medicine protocols in the lab and in clinical practice. The nexus of concerns related to oncology, cardiology, and virology (SARS-CoV-2) presents a fortuitous context within which to examine the theory and practice of biomedical data curation. Innovative Data Integration and Conceptual Space Modeling for COVID, Cancer, and Cardiac Care argues that a well-rounded approach to data modeling should optimally embrace multiple perspectives inasmuch as data-modeling is neither a purely formal nor a purely conceptual discipline, but rather a hybrid of both. On the one hand, data models are designed for use by computer software components, and are, consequently, constrained by the mechanistic demands of software environments; data modeling strategies must accept the formal rigors imposed by unambiguous data-sharing and query-evaluation logic. In particular, data models are not well-suited for software-level deployment if such models do not translate seamlessly to clear strategies for querying data and ensuring data integrity as information is moved across multiple points. On the other hand, data modeling is, likewise, constrained by human conceptual tendencies, because the information which is managed by databases and data networks is ultimately intended to be visualized/utilized by humans as the end-user. Thus, at the intersection of both formal and humanistic methodology, data modeling takes on elements of both logico-mathematical frameworks (e.g., type systems and graph theory) and conceptual/philosophical paradigms (e.g., linguistics and cognitive science). The authors embrace this two-sided aspect of data models by seeking non-reductionistic points of convergence between formal and humanistic/conceptual viewpoints, and by leveraging biomedical contexts (viz., COVID, Cancer, and Cardiac Care) so as to provide motivating examples and case-studies in this volume. Provides an analysis of how conceptual spaces and related cognitive linguistic approaches can inspire programming and query-processing models Outlines the vital role that data modeling/curation has played in significant medical breakthroughs Presents readers with an overview of how information-management approaches intersect with precision medicine, providing case studies of data-modeling in concrete scientific practice Explores applications of image analysis and computer vision in the context of precision medicine Examines the role of technology in scientific publishing, replication studies, and dataset curation

The Political Economy and Media Coverage of the European Economic Crisis

The case of Ireland

Routledge The European economic crisis has been ongoing since 2008 and while austerity has spread over the continent, it has failed to revive economies. The media have played an important ideological role in presenting the policies of economic and political elites in a favourable light, even if the latter's aim has been to shift the burden of adjustment onto citizens. This book explains how and why, using a critical political economic perspective and focusing on the case of Ireland. Throughout, Ireland is compared with contemporary and historical examples to contextualise the arguments made. The book covers the housing bubble that led to the crash, the rescue of financial institutions by the state, the role of the European institutions and the International Monetary Fund, austerity, and the possibility of leaving the eurozone for Europe's peripheral countries. Through a systematic analysis of Ireland's main newspapers, it is argued that the media reflect elite views and interests and downplay alternative policies that could lead to more progressive responses to the crisis.

Computer Networks

17th Conference, CN 2010, Ustron, Poland, June 15-19, 2010. Proceedings

Springer The continuous and intensive development of computer science results in the fast progress of computer networks. Computer networks, as well as the entire computer science field, are subject to regular changes caused by the general development of technology, and also the influence of new computer science technology. This progress refers to the methods as well as the tools of designing and modeling computer networks. Particularly, the range of using computer networks permanently is extended thanks to the results of new research and new applications, which were not even taken into consideration in the past. These new applications stimulate the development of scientific research, because the wider use of system solutions based on computer networks results in both theoretical and practical problems. This book is the evidence of the above considerations, with particular chapters referring to the broad spectrum of issues and problems. This book is the result of the research of scientists from many remarkable scientific research centers. It was created as a collection of articles presented during the 17th edition of the International Conference 'Computer Networks', which took place in Ustroń (Poland) during June 15-19, 2010. This conference, organized continuously since 1994 by the Institute of Informatics of Silesian University of Technology, is the oldest event of this kind organized in Poland, having an international status for three years. This year's edition like last year, took place under the auspices of IEEE Poland Section.

Emerging Issues II

The Changing Roles and Identities of Teachers and Learners in Higher Education

NAIRTL This book presents a wide selection of issues currently of interest and concern in higher education institutions in Ireland. The chapters are snapshots of the intersection between theory, practice and research in particular settings; they are not meant to be comprehensive. Nevertheless, they present practice approaches, new theoretical considerations and informal conversations, and include signposts to important literature in the area. The authors contextualise current concerns, and discuss how they have responded strategically to national and international trends in higher education. They also highlight how new roles and identities for staff and students in higher education have emerged in response to changes in institutional, social and technological contexts, among others. This book contains the following: (1) Higher Education in Ireland: Introduction (Bettie Higgs and Marian McCarthy); (2) Writing Identity through the Educational Developers in Ireland Network (EDIN) (Ciara O'Farrell); (3) Mature Cynics and Fledgling Eclectics: Elaborating Instructional Design for the Net Generation (David Jennings and Diane Cashman); (4) Promoting Integrative Learning in First-year Science (Bettie Higgs); (5) The Journey to High Level Performance: Using Knowledge on the Novice-Expert Trajectory to Enhance Higher Education Teaching (Sarah Moore, Geraldine O'Neill and Terry Barrett); (6) Integrating Concepts of Integrative Learning (Bettie Higgs and Brendan Hall); (7) Strategies for Implementing Group Work in Large Classes: Lessons from Enquiry-Based Learning (Geraldine O'Neill and Ivan Moore); (8) Supporting Graduate Teaching Assistants at Trinity College Dublin (Jacqueline Potter and Orla Hanratty); (9) Teaching for Understanding for Lecturers: Towards a Scholarship of Teaching and Learning (Marian McCarthy); (10) Encouraging Student Creativity in Higher Education (Terry Barrett and Roisin Donnelly); (11) Reflections on Conversations as a Catalyst for Change 2003-2007 (Marion Palmer and Conor Heagney); (12) The Changing Role of the Academic Library in Learning and Teaching (Helen Fallon and Ellen Breen); and (13) The Role of a Virtual Learning Environment (VLE) in the Teaching of an Accredited Module in Information Literacy Skills (Claire McAvinia, Helen Fallon and Mairead McQuaid). Librarians' Reflections are appended. Each section contains tables, figures, and references.
