Against Doom

A Climate Insurgency Manual

[PM Press](#) While the world's people suffer the apocalyptic torments of floods, fires, droughts, heatwaves, desertification, disease vectors, food shortages, forced migration, ecosystem collapse, extinction, and other effects of uncontrolled climate change, the world's governmental and political leaders continue to accelerate our wild ride to climate doom. Is there any way for the rest of us to put on the brakes? Climate insurgency is a strategy for using people power to realize our common interest in protecting the climate. It uses mass, global, nonviolent action to challenge the legitimacy of public and corporate officials who are perpetrating climate destruction. A global climate insurgency has already begun. It has the potential to halt and roll back the fossil fuel agenda and the global thrust toward climate destruction. *Against Doom: A Climate Insurgency Manual* tells how to put that strategy into action—and how it can succeed. It is a handbook for halting global warming and restoring our climate—a how-to for climate insurgents.

Thermodynamics of Solutions

From Gases to Pharmaceuticals to Proteins

Springer Science & Business Media This book consists of a number of papers regarding the thermodynamics and structure of multicomponent systems that we have published during the last decade. Even though they involve different topics and different systems, they have something in common which can be considered as the “signature” of the present book. First, these papers are concerned with “difficult” or very nonideal systems, i. e. systems with very strong interactions (e. g. , hyd- gen bonding) between components or systems with large differences in the partial molar volumes of the components (e. g. , the aqueous solutions of proteins), or systems that are far from “normal” conditions (e. g. , critical or near-critical mixtures). Second, the conventional thermodynamic methods are not sufficient for the accurate treatment of these mixtures. Last but not least, these systems are of interest for the pharmaceutical, biomedical, and related industries. In order to meet the thermodynamic challenges involved in these complex mixtures, we employed a variety of traditional methods but also new methods, such as the fluctuation theory of Kirkwood and Buff and ab initio quantum mechanical techniques. The Kirkwood-Buff (KB) theory is a rigorous formalism which is free

of any of the - proximations usually used in the thermodynamic treatment of multicomponent systems. This theory appears to be very fruitful when applied to the above mentioned "difficult" systems.

Sustainable Development Policy Directory

John Wiley & Sons This Directory means that a whole range of built environment professionals need never be caught out by the perversities of policy - in its formulation or on its journey into the real life of you and me. To have in one place the means of not only burrowing down into any one policy, but also of exploring the interconnections is a precious resource for any professional - 'sustainability literate' or not. Today, nobody who delivers our built environment can be excused from taking responsibility for the future. Armed with this Directory their contribution can only be made more effective. Sara Parkin OBE Forum for the Future This desk-top reference on sustainable development provides essential information for all who need to be up-to-date and familiar with the implications of the legal, fiscal and planning frameworks around the global and local sustainability agenda. It is relevant to a range of organisations and individuals - from national and local authorities, professional bodies, built environment professions, academia, environmental consultancies, non-governmental organisations and others. Carefully designed to facilitate access for a diverse range of stakeholders, it covers international, European, British and local policies in key built environment themes, and develops their inter-relationship to sustainable development. The Directory addresses each theme in a series of tables which summarise the policy purpose and also provide web-links to view the specific policy documents. The themes covered are: · Biodiversity · Climate Change · Construction · Energy · Environment · Planning · Pollution · Social Issues · Sustainable Development Policy and Practice · Transport · Urban Development · Waste Management · Water Other books of interest: The Green Guide to Specification Anderson ISBN: 1405119616 Smart & Sustainable Built Environments Yang Hardback ISBN: 1405124229 Sustainable Property Development Keeping Paperback ISBN: 0632058048 Previously Developed Land Syms Paperback 1405106972 Evaluating Sustainable Development Brandon 0632064862 Cover design by Garth Stewart www.thatconstructionsite.com

Governance in Nigeria post-1999: Revisiting the democratic 'new dawn' of the Fourth Republic

Pretoria University Law Press At the start of Nigeria's Fourth Republic on 29 May 1999, there was great optimism as to the emergence of a new democratic future representing a significant break from the political undulations of the past. Two decades and four presidential epochs later, there is a prevalent question as to how well Nigeria has fared in governance and human rights post-1999. This book revisits the democratic 'new dawn' of the Fourth Republic discussing pertinent matters integral to Nigeria's democratic future post-2019.

Global Climate Change and Coastal Tourism

Recognizing Problems, Managing Solutions and Future Expectations

CABI Building upon the book *Disappearing Destinations* (Jones and Phillips 2010) and its conclusion that promoted the need to recognize problems, meet expectations and manage solutions *Global Climate Change and Coastal Tourism* explores current threats to, and consequences of, climate change on existing tourism coastal destinations. Part 1 of the book provides a theoretical platform and addresses topics such as sustainability, tourism impacts, governance trade and innovation and how the media addresses climate change and tourism. It also assesses management and policy options for the future sustainability of threatened tourism coastal destinations. Part 2 presents case studies from all regions of the world (Europe, The Americas, Asia, Africa and Australasia) which synthesise findings to make recommendations that can be used to promote strategies that ameliorate projected impacts of climate change on coastal tourism infrastructure and in turn promote the future sustainability of coastal tourism destinations. This is a timely and informative text with appeal to researchers, undergraduate and post graduate students of tourism management, tourism planning, sustainable tourism development and leisure management, coastal tourism/management, environmental management/planning, geography, coastal zone management or climate change studies.

Cities Reducing Poverty

How Vibrant Communities Are Creating Comprehensive Solutions to the Most Complex Problems of Our Times

BPS Books This book explores the efforts of collaborative groups in six different Canadian cities as they work to reduce poverty, as part of *Vibrant Communities*, a cross-Canada effort of many cities to reduce poverty in Canada by creating

partnerships that make use of the most important assets -- people, organizations, businesses, and governments. The six groups in this group are: a project that seeks to get long-term unemployed job seekers trained and transported to jobs across the sprawling region of Niagara; a coalition pressing Calgary City Council to pass (and maintain) a subsidized bus pass for people with low incomes; a grassroots network of citizens' partnership clubs in Montréal working to turn around a forgotten neighbourhood; an unusual collection of local organizations in Surrey working to get homeless day labourers back into the mainstream; a high-level roundtable of civic leaders in Hamilton mobilizing the community to make it the best place to raise a child; and a business-led group in Saint John that aims to reduce that city's poverty rate by one half.

The Climate Solutions Consensus

What We Know and What To Do About It

Island Press In 2007, the Intergovernmental Panel on Climate Change shared the 2007 Nobel Peace Prize (with former Vice President Al Gore) for its reporting on the human causes of climate change. In 2008, the National Council for Science and the Environment reported that the acceleration of climate change is already faster than the IPCC projected only a year earlier. How we deal with the rapid environmental changes, and the human forces that are driving these changes, will be among the defining issues of our generation. Climate Solutions Consensus presents an agenda for America. It is the first major consensus statement by the nation's leading scientists, and it provides specific recommendations for federal policies, for state and local governments, for businesses, and for colleges and universities that are preparing future generations who will be dealing with a radically changed climate. The book draws upon the recommendations developed by more than 1200 scientists, educators and decision makers who participated in the National Council for Science and the Environment's 8th National Conference on Science, Policy and the Environment. After presenting a lucid narrative of the science behind climate change and its solutions, Climate Solutions Consensus presents 35 practical, results-oriented approaches for minimizing climate change and its impacts. It clearly spells out options for technological, societal, and policy actions. And it deals head-on with controversial topics, including nuclear energy, ocean fertilization and atmospheric geo-engineering. One of the book's key conclusions is that climate solutions are about much more than energy sources. They involve re-examining everything people do with an eye toward minimizing climate impacts. This includes our eating habits, consumption patterns, transportation, building and housing, forestry, land use, education, and more. According to these scientists, the time to act is now. With clarity and urgency, they tell us exactly what needs to be done to start reversing the driving factors behind climate change, minimizing their consequences, and adapting to what is beyond our power to stop.
