Plus - an array of digital resources provides even more choice and flexibility. Students can learn in the classroom or on the move with Online Practice. Language assessment. The first goal is to explore the difference between fairness and justice in language assessment. The authors distinguish internal and external dimensions of the equitable and just treatment of individuals taking language tests which are used as gatekeeping devices to determine access to education and employment, immigrant status, citizenship, and other rights. The second goal is to show how the extent of test fairness can be demonstrated and improved using the tools of psychometrics, in particular the models collectively known as Rasch measurement. "This book will have an enormous impact on the field of language assessment. Using Rasch analysis models to explore and identify sources of unfairness, the authors make a compelling case for fairness in the design and implementation of language assessment instruments and for justice in the interpretation and use of test results. A real strength of the book is that it guides readers through analytical techniques in an accessible way." Dan Douglas, Professor Emeritus, Applied Linguistics Program, Iowa State University.*

The Right to Development in International Law

The Case of Pakistan

[Routledge](#) *The Right to Development in International Law rigorously explores the right to development (RTD) from the perspectives of international law as well as the constitutionally guaranteed fundamental rights and the Islamic concept of social justice in Pakistan. The volume draws on a wide range of relevant sources to analyse the legal status of international cooperation in contemporary international law, before exploring the domestic application of the right to development looking at the example of Pakistan, a country that is undergoing radical transformation in terms of its internal governance structures and the challenges it faces for enforcing the rule of law. Of particular importance is the examination of the RTD and Shari'ah law in Pakistan which adds a new perspective to the RTD debate and enriches the discussion about human rights and Shari'ah across the world. Through focusing on Pakistan the book links international perspectives and the international human rights framework with the domestic constitutional apparatus for enforcing the RTD within that jurisdiction. In doing so, Khurshid Iqbal argues that the RTD may be promoted through existing constitutional mechanisms if fundamental rights are widely interpreted by the superior courts, effectively implemented by the lower courts and if Shari'ah law is progressively interpreted in public interest. Iqbal's work will appeal to researchers, professionals and students in the fields of law, human rights, development, international law, South Asian Studies, Islamic law and international development studies.*

Historians as Expert Judicial Witnesses in Tobacco Litigation

A Controversial Legal Practice

Springer Historian Ramses Delafontaine presents an engaging examination of a controversial legal practice: the historian as an expert judicial witness. This book focuses on tobacco litigation in the U.S. wherein 50 historians have witnessed in 314 court cases from 1986 to 2014. The author examines the use of historical arguments in court and investigates how a legal context influences historical narratives and discourse in forensic history. Delafontaine asserts that the courtroom is a performative and fact-making theatre. Nonetheless, he argues that the civic responsibility of the historian should not end at the threshold of the courtroom where history and truth hang in the balance. The book is divided into three parts featuring an impressive range of European and American case studies. The first part provides a theoretical framework on the issues which arise when history and law interact. The second part gives a comparative overview of European and American examples of forensic history. This part also reviews U.S. legal rules and case law on expert evidence, as well as extralegal challenges historians face as experts. The third part covers a series of tobacco-related trials. With remunerations as high as hundreds of thousands of dollars and no peer-reviewed publications or communication on the part of the historians hired by the tobacco companies the question arises whether some historians are willing to trade their reputation and that of their university for the benefit of an interested party. The book further provides 50 expert profiles of the historians active in tobacco litigation, lists detailing the manner of the expert's involvement, and West Law references to these cases. This book offers profound and thought-provoking insights on the post-war forensicification of history from an interdisciplinary perspective. In this way, Delafontaine makes a stirring call for debate on the contemporary engagement of historians as expert judicial witnesses in U.S. tobacco litigation.
