**A Lesser-Known History of How Nature Does Mass Immunization A Whole Lot Better Than Us! Don't Count Your Children 'til they've had the Pox** [Dig-Press](#) **A book about SURVIVING Some of the Deadliest Plagues Known to Humanity... (& An Antidote to Corona Virus/COVID-19?)** “...the more you know about the past, the better you are prepared for the future.” ~ Theodore Roosevelt ~ The direct quotes given throughout this study - augmented by original mortality data compiled and edited by A. Parent, reveals a lesser-known history of the dramatic decline in deaths from a whole plethora of pathogens that once plagued our developing nations and its probable cause. I.e., a natural universal biological phenomenon of ancestrally acquired robust resilience to dying from once deadlier contagions throughout the generations. The significance of this being that, whilst our health officials are expecting the plagues of old to return at any moment and are poised nervously armed with whatever vaccines they can throw at them, it would appear that our immune systems having very long-term ancestral memory have not forgotten how to battle against such opportunistic invaders of the past and it now looks highly likely that almost all of us would survive even if some of the deadliest contagions returned today to plague us in their original colours. This, therefore, also has implications for our more modern and firmly entrenched belief that we eradicated at least some of these bugs and, obviously, with our current mass vaccination strategies that are so firmly entrenched and becoming near-universal, we are not currently following nature's schedule of childhood natural immunization as a result. Thus, we assess the consequences of this situation in the context of the above. In essence, after reviewing all the relevant

evidence for when, how and to what degree we have attempted to protect against infectious diseases at a population level versus nature's method of full exposure, this study reaches the inescapable conclusion that Nature has done a significantly better job of natural mass immunization down through the generations and across the entire world in line with our respective levels of development, a whole lot better than us. The moral of this story is that it looks like our ancestors were counting more of their descendent children (that's us) because they had the (actual) Pox and just about everything else going in the way of infectious diseases and we were healthier as a result. That was until we began to intervene in the natural generational immunity cycle - but, the protection afforded by our mass vaccination efforts being so short-lived - ironically, maybe helping to restore this remarkable immunization cycle once again. All in all, it is hoped that this study will go some way to alleviating our unnatural phobia regarding the germ or pathogens of old returning, and go some way to restoring our faith in Nature so that this may inform a more natural health focused future. **The Official ACT Prep Guide 2021-2022, (Book + 6 Practice Tests + Bonus Online Content)** [John Wiley & Sons](#) Don't let your competitors race ahead of you. Norton & Company](#) An entertaining and illuminating collection of 100 surprising connections between math and the arts. At first glance, the worlds of math and the arts might not seem like comfortable neighbors. But as mathematician John D. Barrow points out, they have a strong and natural affinity—after all, math is the study of all patterns, and the world of the arts is rich with pattern. Barrow whisks us through 100 thought-provoking and often whimsical intersections between math and many arts, from the golden ratios of Mondrian's rectangles and the curious fractal-like nature of Pollock's drip paintings to ballerinas' gravity-defying leaps and the next generation of monkeys on typewriters tackling Shakespeare. For those of us with our feet planted more firmly on the ground, Barrow also wields everyday equations to reveal how many guards are needed in an art gallery or where you should stand to look at sculptures. From music and drama to literature and the visual arts, Barrow's witty and accessible observations are sure to spark the imaginations of math nerds and art aficionados alike. **Model Rules of Professional Conduct** [American Bar Association](#) The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. The Breakdown Where We Have Been & Where We Are Headed [Dorrance Publishing](#) The Breakdown By: Anthony Ciotti III The Breakdown gives a clear and concise explanation of the various political, economic, linguistic, and psychological systems which govern our everyday lives. It speaks openly and honestly about the lies and misrepresentations that everybody is indoctrinated to since birth and that are taught in schools. It also covers how many prestigious academics speak about these problems, yet the information is not disseminated to the general populace in an effective manner, for various reasons. The Breakdown starts at the most base level with language: how it is misused by the majority and clears up what every language is at its most base level. The book then moves up to the concepts of Freedom, governance, economics, and goes into the philosophical outlook of what groups of people strive to be. If a person knows the mechanics of a car, a repair mechanic cannot con them into unnecessary repairs. Once you know the mechanics of the various systems that control our lives, another human won't be able to con you into supporting lies and snake oil. **Inhospitable World Cinema in the Time of the Anthropocene** [Oxford University Press](#) In recent years, environmental and human rights advocates have suggested that we have entered the first new geological epoch since the end of the ice age: the Anthropocene. In this new epoch, humans have come to reshape unwittingly both the climate and natural world; humankind has caused mass extinctions of plant and animal species, polluted the oceans, and irreversibly altered the atmosphere. Ironically, our efforts to make the planet more hospitable to ourselves seem to be driving us toward our inevitable extinction. A force of nature, humanity is now decentered as the agent of history. As Jennifer Fay argues, this new situation is to geological science what cinema has always been to human culture. Film, like the Anthropocene, is a product of the industrial revolution, but arises out of a desire to preserve life and master time and space. It also calls for the creation of artificial worlds, unnatural weather, and deadly environments for entertainment, scientific study, and devising military strategy. Filmmaking stages, quite literally, the process by which worlds and weather come into being and meaning, and it mimics the forces that are driving this new planetary inhospitality. Cinema, in other words, provides an image of "nature" in the age of its mechanical reproducibility. Fay argues that cinema exemplifies the philosophical, political, and perhaps even logistical processes by which we can adapt to these forces and also imagine a world without humans in it. Whereas standard ecological criticism attends to the environmental crisis as an unraveling of our natural state, this book looks to film (from Buster Keaton, to Jia Zhangke, to films of atomic testing and early polar exploration) to consider how it reflects upon the creation and destruction of human environments. What are the implications of ecological inhospitality? What role might cinema and media theory play in challenging our presumed right to occupy and populate the world? As an art form, film enjoys a unique relationship to the material, elemental world it captures and produces. Through it, we may appreciate the ambitions to design an unhomey planet that may no longer accommodate us. **A History of Western Society, Volume 2 From the Age of Exploration to the Present** [Macmillan](#) Now from Bedford/St. Martin's, **A History of Western Society** is one of the most successful textbooks available because it captures students' interest in the everyday life of the past and ties social history to the broad sweep of politics and culture.
