Radiofrequency in Cosmetic Dermatology

Karger Medical and Scientific Publishers Radiofrequency (RF) has been used in many areas of medicine for some time, but only gained popularity in aesthetics in the early 2000s. Currently, a multitude of devices which offer an array of technologies, each geared to specific applications, are on the market. In this book, a comprehensive discussion of the evolving area of RF is provided, and the current and cutting-edge technologies which span from noninvasive treatments of facial wrinkles to invasive body contouring procedures are discussed in detail. The methodologies covered include thermal and ablative modalities, volumetric and fractional approaches, as well as practical aspects of application in clinical practice. Included are also pearls on patient management and prevention and treatment of complications. Finally, RF-based procedures are compared with equivalent laser and surgical approaches in a risk-benefit evaluation. Reviewing the standard of care for RF-based treatments and providing information relevant for clinical decision-making and practice management, this publication is a valuable tool for dermatologists, plastic surgeons and all practitioners who use or are contemplating the introduction of RF into practice.

Suzanne Noël: Cosmetic Surgery, Feminism and Beauty in Early Twentieth-Century France

Routledge Working at the forefront of cosmetic surgery at the turn of the twentieth century, Dr Suzanne Noël was both a pioneer in her medical field and a firm believer in the advancement of women. Today her views on the benefits of aesthetic surgery to women may seem at odds with her feminist principles, but by placing Noël in the context of turn-of-the-century French culture, this book is able to demonstrate how these two worldviews were reconciled. Noël was able to combine her intense convictions for gender equality and anti-ageism in the workforce with her underlying compassion and concern for her female patients, during a time when there were no laws in place to protect women from workplace discrimination. She was also responsible for several advances in cosmetic surgery, a thriving industry, and is today best known for her development of the mini facelift. This book, therefore, sheds much valuable light on advances in aesthetic surgery, twentieth-century beauty culture, women and the public sphere, and the 'new woman'.
