### **FINANCIAL ACCOUNTING**

McGraw-Hill Education Libby/Libby/Hodge wrote this text based on their belief that the subject of financial accounting is inherently interesting, but financial accounting textbooks are often not. They believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business. When writing this text, they considered career relevance as their guide when selecting material, and the need to engage the student as their guide to style, pedagogy, and design. Libby/Libby/Hodge successfully implements a real-world, single focus company approach in every chapter. Students and instructors have responded very favorably to the use of focus companies and the real-world financial statements. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting regardless of whether or not the student has chosen to major in accounting. Libby/Libby/Hodge believes in the building-block approach to teaching transaction analysis. Most faculty agree that mastery of the accounting cycle is critical to success in financial accounting. And yet all other financial books introduce and develop transaction analysis in one chapter, bombarding a student early in the course with an overload of new concepts and terms. The authors believe that most faculty take more time with the accounting cycle, but other financial accounting textbooks don't. By slowing down the introduction of transactions and giving students time to practice and gain mastery, this building-block approach leads to greater student success in their study of later topics in financial accounting such as adjusting entries.

## **ESSAYS IN HONOUR OF ANTHONY HOPWOOD**

---

*OUP Oxford Accounting has an ever-increasing significance in contemporary society. Indeed, some argue that its practices are fundamental to the development and functioning of modern capitalist societies. We can see accounting everywhere: in organizations where budgeting, investing, costing, and performance appraisal rely on accounting practices; in financial and other audits; in corporate scandals and financial reporting and regulation; in corporate governance, risk management, and accountability, and in the corresponding growth and influence of the accounting profession. Accounting, too, is an important part of the curriculum and research of business and management schools, the fastest growing sector in higher education. This growth is largely a phenomenon of the last 50 years or so. Prior to that, accounting was seen mainly as a mundane, technical, bookkeeping exercise (and some still share that naive view). The growth in accounting has demanded a corresponding engagement by scholars to examine and highlight the important behavioural, organizational, institutional, and social dimensions of accounting. Pioneering work by accounting researchers and social scientists more generally has persuasively demonstrated to a wider social science, professional, management, and policy audience how many aspects of life are indeed constituted, to an important extent, through the calculative practices of accounting. Anthony Hopwood, to whom this book is dedicated, has been a leading figure in this endeavour, which has effectively defined accounting as a distinctive field of research in the social sciences. The book brings together the work of leading international accounting academics and social scientists, and demonstrates the scope, vitality, and insights of contemporary scholarship in and on accounting and auditing.*
