## Back to Basics

### Economic Concepts Explained

**International Monetary Fund** This paper discusses about capitalism that is often thought of as an economic system in which private actors own and control property in accord with their interests, and demand and supply freely set prices in markets in a way that can serve the best interests of society. The essential feature of capitalism is the motive to make a profit. In a capitalist economy, capital assets—such as factories, mines, and railroads—can be privately owned and controlled, labor is purchased for money wages, capital gains accrue to private owners, and prices allocate capital and labor between competing uses. Although some form of capitalism is the basis for nearly all economies today, for much of the past century it was but one of two major approaches to economic organization. In the other, socialism, the state owns the means of production, and state-owned enterprises seek to maximize social good rather than profits.

# Modern Principles of Economics

Macmillan From the authors: See the Invisible Hand. Understand Your World. That's the tagline of Modern Principles and our teaching philosophy. Nobel laureate Vernon Smith put it this way: At the heart of economics is a scientific mystery... a scientific mystery as deep, fundamental and inspiring as that of the expanding universe or the forces that bind matter... How is order produced from freedom of choice? We want students to be inspired by this mystery and by how economists have begun to solve it. Thus, we show how markets interconnect and respond in surprising ways to changes in resources and preferences. Consider, for example, how markets respond to a reduction in the supply of oil. Of course, the price of oil increases giving consumers an incentive to use less and suppliers an incentive to discover more. But an increase in the price of oil also encourages Brazilian sugar cane farmers to devote more of their production to ethanol and less to sugar thereby driving up the price of sugar. An increase in the price of sugar means a reduction in the quantity of candy demanded. So one way the market responds to a reduction in the supply of oil is by encouraging consumers to eat less candy! In analyses like this, we teach students to see the invisible hand and in so doing to understand their world. Similarly, we offer a unique and simple proof of the amazing invisible hand theorem that without any central direction competitive markets allocate production across firms in a way that minimizes aggregate costs! To understand their world students must understand when self-interest promotes the social interest and when it does not. Thus, Modern Principles has in-depth analyses of externalities, public goods, and ethical issues with market incomes and trade. Moreover, we always discuss economic theory in the context of real world problems such as the decline of the ocean fisheries, climate change, and the shortage of human organs for transplant.

## A Proposal to End the COVID-19 Pandemic

International Monetary Fund Urgent steps are needed to arrest the rising human toll and economic strain from the COVID-19 pandemic that are exacerbating already-diverging recoveries. Pandemic policy is also economic policy as there is no durable end to the economic crisis without an end to the health crisis. Building on existing initiatives, this paper proposes pragmatic actions at the national and multilateral level to expeditiously defeat the pandemic. The proposal targets: (1) vaccinating at least 40 percent of the population in all countries by the end of 2021 and at least 60 percent by the first half of 2022, (2) tracking and insuring against downside risks, and (3) ensuring widespread testing and tracing, maintaining adequate stocks of therapeutics, and enforcing public health measures in places

where vaccine coverage is low. The benefits of such measures at about \$9 trillion far outweigh the costs which are estimated to be around \$50 billion—of which \$35 billion should be paid by grants from donors and the residual by national governments potentially with the support of concessional financing from bilateral and multilateral agencies. The grant funding gap identified by the Access to COVID-19 Tools (ACT) Accelerator amounts to about \$22 billion, which the G20 recognizes as important to address. This leaves an estimated \$13 billion in additional grant contributions needed to finance our proposal. Importantly, the strategy requires global cooperation to secure upfront financing, upfront vaccine donations, and at-risk investment to insure against downside risks for the world.

### Development Challenges of India After Twenty Five Years of Economic Reforms

## Inequality, Labour, Employment and Migration

Springer Nature This book revisits some of the persisting challenges of development of India, which remain unresolved even after twenty-five years of economic reforms and almost fifteen years of high growth rate. These include defining purpose of development, inequality, labour, work, unemployment, agrarian distress and migration. The book questions the overemphasis on growth to the extent of neglecting basic issues of development. With a number of contributions re-imagining development and its political economy, the book discusses above mentioned issues in light of new data and more recent conceptions of the issues. The contributors of this volume are eminent researchers in their respective field. Presenting primary as well as secondary data, the book considers the latest advances and research and also addresses new challenges like the global reorganization of production and the consequences for labour and the world of work, along with skills question. World of work has received detailed investigation in this book. This is a timely addition in existing literature especially in context of pandemic and lockdown. Informality and un/employment question is addressed in this context. Relationship among poverty, inequality and growth is examined in light of newer understanding. Agrarian distress is looked in a broader context. A number of papers are examining migration question by expanding coverage of migration and including labour mobility as apart of migration debate. The present crisis of

migrant labour and absence of social security for these workers is also discussed. This book is primarily intended for those interested in recent advances on some of the basic aspects of development, like poverty, inequality, informality, world of work, migration and labour mobility. It is also useful for researchers, policy makers, journalists and civil society organizations working on these issues.

## Managing Events, Festivals and the Visitor Economy Concepts, Collaborations and Cases

**CABI** This edited text, intended to support a research-informed approach to learning and teaching, presents an array of concepts, collaborations and in-depth cases related to managing events, festivals and the visitor economy. Authors offer an array of philosophical, political, cultural, and ethical perspectives on how to achieve this across a range of contexts, from Cambodia, China, Egypt to the British cathedral city of Lincoln. Though recognising individual difference, each chapter unites in their common pursuit of supporting the United Nations Sustainable Development Goals (UNSDGs). This is significant as utilising the UNSDGs as a normative organising framework for how we all think about, plan, and manage a 'good' visitor economy is increasingly ubiquitous. It is with this in mind that each chapter provides explicit links to the UNSDGs and policy and/or practical implications, along with a series of critical self-assessment questions to reflect on the chapter's key arguments. This collection aims to satiate what appears to be an increasing appetite of readers and students alike who seek exposure to rigorous debate in and out of the classroom.

## A Future of Capitalism: The Economic Vision of Robert Heilbroner

**Springer** This book provides an intellectual portrait of Robert Heilbroner. It traces the development of his work and places it within the literature of economic thought. The book finds that Heilbroner is a writer of political economy in the classical sense. His work is more reminiscent of Smith or Marx than of contemporary economic theorists. Heilbroner's economics is built on a solid foundation of social psychology, evolutionary dynamics and human history. This holistic approach affords Heilbroner a wide latitude to define the economic process and the discipline that studies it.
