In *Driving the Future*, Margo T. Oge portrays a future where clean, intelligent vehicles with lighter frames and alternative power trains will produce zero emissions and run at 100+ mpg. With electronic architectures more like those of airplanes, cars will be smarter and safer, will park themselves, and will network with other vehicles on the road to drive themselves. As the director of the EPA's Office of Transportation and Air Quality, Oge was the chief architect behind the Obama administration's landmark 2012 deal with automakers in the US market to double the fuel efficiency of their fleets and to cut greenhouse gas emissions in half by 2025. This was America's first formal climate action using regulation to reduce emissions through innovation in car design. Offering an insider account of the partnership between federal agencies, California, environmental groups, and car manufacturers that led to the historic deal, Margo discusses the science of climate change, the politics of addressing it, and the lessons learned for policy makers. She also takes the reader through the convergence of macro trends that will drive this innovation over the next forty years and be every bit as transformative as those wrought by Karl Benz and Henry Ford. *Driving the Future* is for anyone who wants to know what car they'll be driving in ten, twenty, or thirty years—and for everyone concerned about air quality and climate change now. *Plunkett's Energy Industry Almanac, 2006 The Only Comprehensive Guide to the Energy & Utilities Industry* Plunkett Research, Ltd. The important marketing shift from a "woman's car" to "going green" is discussed. Milestone projects and technologies such as early batteries, hydrogen and bio-mass fuel cells, the upsurge of hybrid vehicles, and the various regulations and market forces that have shaped the industry are also covered.

**The EPA children's environmental health yearbook** *DIANE Publishing*

**National Energy Policy Hearing Before the Subcommittee on Energy and Air Quality of the Committee on Energy and Commerce, House of Representatives, One Hundred Seventh Congress, First Session, February 28, 2001** *Ski*

**Global Environmental Challenges Transitions to a Sustainable World** *Orient Blackswan* This book will change the way we understand the future of our planet. It is both alarming and hopeful. James Gustave Speth, renowned as a visionary environmentalist leader, warns that in spite of all the international negotiations and agreements of the past two decades, efforts to protect Earth's environment are not succeeding. Still, he says, the challenges are not insurmountable. He offers environmental threats around the world. The author explains why current approaches to critical global environmental problems Climate change, biodiversity loss, deterioration of marine environments, deforestation, water shortages, and others don't work now and won't work in the future. He provides a stinging critique of the failure of U.S. leadership and offers intriguing insights into why the U.S. has been able to address domestic environmental threats with some success while largely failing at the international level. Setting forth eight specific steps to a sustainable future, Speth convincingly argues that dramatically different and far-reaching actions by citizens and governments are now urgent. If ever a book could be described as essential, this is it.

**EPA 200-B. Physics of Societal Issues Calculations on National Security, Environment, and Energy** *Springer Science & Business Media* This book provides the reader with essential tools needed to analyze complex societal issues and demonstrates the transition from physics to modern-day laws and treaties. This second edition features new equation-oriented material and extensive data sets drawing upon current information from experts in their fields. Problems to challenge the reader and extend discussion are presented on three timely issues:

- National Security: Weapons, Offense, Defense, Verification, Nuclear Proliferation, Terrorism
- Environment: Air/Water, Nuclear, Climate Change, EM Fields/Epidemiology
- Energy: Current Energy Situation, Buildings, Solar Buildings, Renewable Energy, Enhanced End-Use Efficiency, Transportation, Economics

Praise for the first edition: "This insight is needed in Congress and the Executive Branch. Hafemeister, a former Congressional fellow with wide Washington experience, has written a book for physicists, chemists and engineers who want to learn science and policy on weapons, energy, and the environment. Scientists who want to make a difference will want this book." Richard Scribner, first Director, Congressional Science and Engineering Fellow Program, AAAS "Hafemeister shows how much one can understand about nuclear weapons and missile issues through simple back-of-the-envelope calculations. He also provides compact explanations of the partially successful attempts that have been made over the past 60 years to control these weapons of mass destruction. Hopefully, *Physics of Societal Issues* will help interest a new generation of physicists in continuing this work." Frank von Hippel, Professor, Princeton, former Assistant Director, National Security, White House, OSTP "Energy policy must be quantitative. People who don't calculate economic tradeoffs often champion simplistic hardware. 'The solution is more... nuclear power, or electric cars, or photovoltaics, etc.' Some simple physics will show that the true solution matches supply and demand as an 'integrated resource plan.' *Physics of Societal Issues* is a good place to begin this journey." Arthur Rosenfeld, former California Energy Commissioner, Professor-emeritus, U. of California-Berkeley

**Energy, Transportation & the Environment A Statistical Sourcebook and Guide to Government Data** *Energy, Transportation & the Environment: A Statistical Sourcebook and Guide to Government Data* draws from the vast information resources of the federal government, and culls most current and vital facts available on these critical topics.
